

### Form 1 – Application for Resource Consent

This application is made under Section 88 of the Resource Management Act 1991 (RMA).

The purpose of this Form 1 and the relevant activity form(s) is to provide applications with guidance on information that is required under the Resource Management Act 1991. Please note that these forms are to act as a guide only, and Otago Regional Council reserves the right to request additional information or to reject the application as incomplete under Section 88 of the RMA if the provisions of the fourth schedule of the RMA are not provided (refer to page 6 of this form, which details these requirements).

PLEASE NOTE: You must have Adobe Acrobat Reader installed onto your computer to use this editable version, which you can download for free from the Adobe website. This form cannot be filled in on your internet browser. REMEMBER to save the form to your computer after completing then attach and send via email along with the other relevant application forms/information to <a href="mailto:consents.applications@orc.govt.nz">consents.applications@orc.govt.nz</a>. The form can also be printed and completed manually.

#### 1(a). Applicant's details:

- The full names <u>or</u> Company name <u>or</u> Trust (including full names of all Trustees) of the consent holder who will be responsible for the consent and any associated costs.
- A resource consent can only be held by a legal organisation or fully named individual(s). A legal organisation includes a registered limited company, incorporated group or registered trust. If the application is for a Trust, the full names of all Trustees are required. If the application is not for a limited company, incorporated group or rust, then you must use fully named individual(s).
- All invoices will be made out to and sent to the applicant.

Full name(s):	Queenstown Lakes District Council

Please tick if you do no	t nrefer contact	hy electronic means		

#### Only complete if the applicant consists of multiple parties (e.g. multiple consent holders, Trust etc). Please outline who the key contact for the consent will be, if granted: Simon Mason (as above) Full name: Phone number: Private: Business: Mobile: Email address: 2. Consultant details (if applicable): Claire Perkins Contact person: Landpro Ltd Company: 027 445 6897 Mobile: Phone number: Business: claire@landpro.co.nz Email address: 3. Consents required in relation to this proposal: Water Take surface water Take groundwater Divert Dam Discharge onto or into: Water Air Land Land use: Bore construction Bore alteration Disturbance of contaminated Activities in or on beds of lakes or rivers or floodbanks Coastal Activities in the coastal marine area (i.e. below mean high water spring tide) Where you have indicated the type of consent that is required, you must complete the appropriate application form before your application can be processed. Application forms can be found on the Council's website: www.orc.govt.nz/consents/ready-to-apply-for-a-consent 4. For what purpose is/are the consent(s) required (e.g. gravel extraction, water for irrigation etc): Discharge treated wastewater to the Shotover River and construct a rip-rap outfall structure in the bed of the Shotover River

1(b). Key contact for applicant details (if applicable):

	Address: Shotover River delta
	Legal description(s): Sec 4 SO 409393
	Map reference(s) (NZTM 2000): E 1266096 N 5007045
	Please include location details on separate documentation if there are multiple sites or activities.
	Note: Certificate(s) of Title less than three months old for the site to which this application relates are required.
6.	Are there any current or expired Resource Consents relating to this proposal:
	Yes No
	If yes, give consent number(s), description and expiry date(s):
	RM13.215.03.V2 (expiry 31/12/2031), 2008.238.V2 (expiry 18/3/2044), RM13.215.01 (expiry 18/3/2044)
	(a) Do you agree to your current consent automatically being surrendered should a replacement consent be issued?  Yes No
	(b) Has there been a previous application for this activity that was returned as incomplete?  Yes No
	(c) Have you lodged a pre-application with Council for this activity?  Yes No
	(d) Have you spoken to a Council staff member about this application prior to lodging this application?  Yes No
	If yes, please state name of staff member: Mat Bell & Alexa Harrington
7.	What is the term of consent you are seeking and reason for this term:  Expiry of 31 December 2030 (less than 5 years)
8.	Territorial Local Authority in which activity is situated:
	Dunedin City Council Clutha District Council Central Otago District Council
	Queenstown Lakes District Council  Waitaki District Council
9.	Do you require any other resource consent from any local authority for this activity:
	Yes No
	If yes, please give the date applied for or issued: Application to QLDC will be made separately

5.

Location of proposed activity:

10.	For the land on which the activity occurs, is the applicant (tick one): If the applicant does not own the land to which this application relates, unconditional written approval from the land owner/affected party will be required.				
	The owner The lease holder The occupier				
	Prospective purchaser  NOTE: QLDC is not the owner or occupier at the discharge channel outfall as the land is riverbed managed by DOC  If the applicant is not the land owner, who is the owner of the land on which the activity occurs/is to occur:				
	Name of land owner: Department of Conservation				
	Phone number: Mobile: Business: <u>0800 275 362</u>				
	Email address: info@doc.govt.nz				
11.	Site visit from the Consents Team:  Consents staff are able to meet with you, visit your site and see what you are proposing to do. We find that this is beneficial to everyone involved. The cost of the visit will be included in the total cost of processing your consent. However, we find that applications that have an on-site visit are processed with less congestion and at a similar or lesser overall cost. Please let us know below if you would like us to come and see your site.  I would like a member of the Consents Team to visit my site:  Yes  No				
12.	Processing Officer:				
	Due to high workloads or the complex nature of your application, it could be assigned to a consultant processing officer. Having your application assigned to an external officer should not greatly affect the processing costs. However, if you would like your application to be assigned to an internal officer then please advise. This may mean that your application enters a waiting line to be allocated and may not be processed straight away. If this is the case we will ask for a timeframe extension to cover the waiting time. There may be situations where we cannot accommodate this request but will let you know why this is.				
	I would like my application to only be processed by an internal staff member:  Yes No				

#### 13. How to pay:

A deposit **must** accompany this application (see **page 9** for amounts and ways to pay). The applicant will be invoiced for all costs incurred in processing this application that exceed the deposit.

If the required deposit does not accompany your application, staff will contact you on the email address provided on this form to request payment, and after 3 working days your application will returned as incomplete if no payment is made for the required deposit.

When paying online, p reference.	lease use the word 'Consent' follower	ed by the name of the applicant as a
84 (1 1 6	Please send through an invoice so Creference P0065647	QLDC can arrange payment - please
Online bank transfe	er In person	Credit card
Date of payment:	To be paid following invoice	
Amount paid:	\$3,400	
Payment reference:	P0065647	<del></del>

**Please note:** Your deposit may not cover the entire cost of processing your application. At the end of the application process you will be invoiced for any costs that exceed the deposit. Interim invoices may be sent out for applications, where appropriate. We will communicate processing costs to you at key stages through the process. If you would like this, then please let us know and we can see if this is an option for you.

If your application is returned to you, you will still be charged for the cost of processing the application up to the point it was returned or withdrawn. Therefore, it is recommended that you have your application checked before it is lodged. This is a free service.

Information regarding costs can be found via the following link: www.orc.govt.nz/consents/ready-to-apply-for-a-consent/fees-and-charges

## Checklist Before signing the declaration below, in order to provide a complete application have you remembered to: Fully complete this Form 1, including signed declaration Completed the necessary application forms relating to the activity Application forms can be found on Council's website via the following link: www.orc.govt.nz/consents/ready-to-apply-for-a-consent Payment of the required deposit (see page 8 for fees schedule) Written approvals from all potentially affected parties "Written Approval of an Affected Party" forms are available from Councils website An assessment of effects on the environment An assessment against the relevant objectives, policies and rules from Regional Council Plans, Regional Policy Statement (including proposed and partially operative versions), and relevant Regulations, National Policy Statements, National Environmental Standards and iwi management plans Site and location plans Certificate(s) of Title less than three months old for the site to which this application relates Certificates of Title can be obtained via the Land Information New Zealand website: www.linz.govt.nz Declaration I/we hereby certify that to the best of my/our knowledge and belief, the information given in this application is true and correct. I/we undertake to pay all actual and reasonable application processing costs incurred by the Otago Regional Council. Claire Perkins Name(s): Claire Perkins Location: Date: 2025-03-19 08:49+13:00 Signature(s):\* (or person authorised to sign on behalf of applicant) Ensure you use the "fill and sign" function of Adobe Acrobat when signing this form. Either draw your signature or add an image. Council cannot accept typed signatures. Jonsultant Designation: (e.g. owner, manager, consultant)

Council can accept electronic lodgement of applications if sent to consents.applications@orc.govt.nz.

Alternatively, applications can be posted or delivered to: Otago Regional Council Private Bag 1954 70 Stafford Street Dunedin 9054

30/04/25

Date:

#### Consultation

(consultation is not compulsory, but it can make a process easier and reduce costs)

Under Section 95E of the Resource Management Act 1991 (the Act), the Council will identify affected parties to an application and if the application is to be processed on a non-notified basis the unconditional written approval of affected parties will be required. Consultation with potentially affected parties and interested parties can be commenced prior to lodging the application.

Consultation may be required with the appropriate Tangata Whenua for the area. The address of the local lwi office is: Aukaha, 258 Stuart Street, P O Box 446, Dunedin, Fax (03) 477-0072, Phone (03) 477-0071, Email <a href="mailto:info@aukaha.co.nz">info@aukaha.co.nz</a>. If you are in the Clutha River area you may need to talk to Te Ao Marama Inc, Phone (03) 931 1242. If you require further advice, please contact the Otago Regional Council.

Good consultation practices include:

- Giving people sufficient information to understand your proposal and the likely effects it may have on them
- Allowing sufficient time for them to assess and respond to the information
- Considering and taking into account their responses

Written approval forms are available on Council's website.

#### Information Requirements

In order for any consent application to be processed efficiently in the minimum time and at minimum cost, it is critical that as much relevant information as possible is included with the application.

Resource Management Act 1991

FOURTH SCHEDULE - ASSESSMENT OF EFFECTS ON THE ENVIRONMENT

(Below are the provisions of the fourth schedule of the Act, which describes what must be in an application for resource consent, as amended in 2015)

#### 1. Information must be specified in sufficient detail

Any information required by this schedule, including an assessment under clause 2(1)(f) or (g), must be specified in sufficient detail to satisfy the purpose for which it is required.

#### 2. Information required in all applications

- (1) An application for a resource consent for an activity (the activity) must include the following:
  - (a) a description of the activity; and
  - (b) a description of the site at which the activity is to occur; and
  - (c) the full name and address of each owner or occupier of the site; and
  - (d) a description of any other activities that are part of the proposal to which the application relates; and
  - (e) a description of any other resource consents required for the proposal to which the application relates; and
  - (f) an assessment of the activity against the matters set out in Part 2; and
  - (g) an assessment of the activity against any relevant provisions of a document referred to in section 104(1)(b) ("document" includes regional and district plans, regulations, national policy statements, iwi plans).
- (2) The assessment under subclause (1)(g) must include an assessment of the activity against:
  - (a) any relevant objectives, policies, or rules in a document; and
  - (b) any relevant requirements, conditions, or permissions in any rules in a document; and
  - (c) any other relevant requirements in a document (for example, in a national environmental standard or other regulations).
- (3) An application must also include an assessment of the activity's effects on the environment that:
  - a) includes the information required by clause 6; and
  - (b) addresses the matters specified in clause 7; and
  - (c) includes such detail as corresponds with the scale and significance of the effects that the activity may have on the environment.

#### 3. Additional information required in some applications

An application must also include any of the following that apply:

(1) if any permitted activity is part of the proposal to which the application relates, a description of the permitted activity that demonstrates that it complies with the requirements, conditions, and permissions for the permitted activity (so that a resource consent is not required for that activity under section 87A(1))

- (2) if the application is affected by section 124 or 165ZH(1)(c) (which relate to existing resource consents), an assessment of the value of the investment of the existing consent holder (for the purposes of section 104(2A))
- (3) if the activity is to occur in an area within the scope of a planning document prepared by a customary marine title group under section 85 of the Marine and Coastal Area (Takutai Moana) Act 2011, an assessment of the activity against any resource management matters set out in that planning document (for the purposes of section 104(2B).
- **4.** (relates to subdivisions not included here as subdivisions are not within ORC's jurisdiction)

#### 5. Additional information required in application for reclamation

An application for a resource consent for reclamation must also include information to show the area to be reclaimed, including the following:

- (1) the location of the area; and
- (2) if practicable, the position of all new boundaries; and
- (3) any part of the area to be set aside as an esplanade reserve or esplanade strip.

#### Assessment of environmental effects

#### 6. Information required in assessment of environmental effects

- (1) An assessment of the activity's effects on the environment must include the following information:
  - (a) if it is likely that the activity will result in any significant adverse effect on the environment, a description of any possible alternative locations or methods for undertaking the activity
  - (b) an assessment of the actual or potential effect on the environment of the activity
  - (c) if the activity includes the use of hazardous substances and installations, an assessment of any risks to the environment that are likely to arise from such use
  - (d) if the activity includes the discharge of any contaminant, a description of:
    - the nature of the discharge and the sensitivity of the receiving environment to adverse effects; and
    - (ii) any possible alternative methods of discharge, including discharge into any other receiving environment.
  - (e) a description of the mitigation measures (including safeguards and contingency plans where relevant) to be undertaken to help prevent or reduce the actual or potential effect
  - (f) identification of the persons affected by the activity, any consultation undertaken, and any response to the views of any person consulted
  - (g) if the scale and significance of the activity's effects are such that monitoring is required, a description of how and by whom the effects will be monitored if the activity is approved
  - (h) if the activity will, or is likely to, have adverse effects that are more than minor on the exercise of a protected customary right, a description of possible alternative locations or methods for the exercise of the activity (unless written approval for the activity is given by the protected customary rights group).
- (2) A requirement to include information in the assessment of environmental effects is subject to the provisions of any policy statement or plan
- (3) To avoid doubt, subclause (1)(f) obliges an applicant to report as to the persons identified as being affected by the proposal, but does not:
  - (a) oblige the applicant to consult any person; or
  - (b) create any ground for expecting that the applicant will consult any person.

#### 7. Matters that must be addressed by assessment of environmental effects

- (1) An assessment of the activity's effects on the environment must address the following matters:
  - (a) any effect on those in the neighbourhood and, where relevant, the wider community, including any social, economic, or cultural effects
  - (b) any physical effect on the locality, including any landscape and visual effects
  - (c) any effect on ecosystems, including effects on plants or animals and any physical disturbance of habitats in the vicinity
  - (d) any effect on natural and physical resources having aesthetic, recreational, scientific, historical, spiritual, or cultural value, or other special value, for present or future generations
  - (e) any discharge of contaminants into the environment, including any unreasonable emission of noise, and options for the treatment and disposal of contaminants
  - (f) any risk to the neighbourhood, the wider community, or the environment through natural hazards or the use of hazardous substances or hazardous installations.
- (2) The requirement to address a matter in the assessment of environmental effects is subject to the provisions of any policy statement or plan.

Set out below are details of the amounts payable for those activities to be funded by fees and charges, as authorised by s36(1) of the Resource Management Act 1991.

#### Resource Consent Application Fees (from 1 July 2020)

Note that the fees shown below are a deposit to be paid on lodgement of a consent application and applications for exemptions in respect of water metering devices. This deposit will not usually cover the full cost of processing the application, and further costs are incurred at the rate shown in the scale of charges. GST is included in all fees and charges.

If you wish to make a payment via internet banking, or online, the details are below. Please note the applicants name and 'consent application' should be used as reference when paying the deposit.

For ways to pay, visit: www.orc.govt.nz/consents/ready-to-apply-for-a-consent

#### **Pre-Application Work**

Fees payable for pre-application work carried out before a consent application is lodged with Council will be incurred at the rates shown in the scale of charges.

Publicly Notified Applications: <sup>3</sup> First application	<b>\$</b> 5,000.00
Non-Notified Applications and Limited Notification Applications: <sup>3</sup> First application (except those below) Multiple Applications <sup>1</sup> Variation to Conditions – s127 Administrative Variation – s127	\$ 1,750 2,300 1,750 1,750
Fixed Fees Exemptions from water metering regulations Bores	<b>\$</b> 400 600
<b>Hearings</b> Payment for Commissioner request – s100A	Per Note 2 below Per Note 4 below
<b>Objections</b> Payment for Commissioner request – s357AB	Per Note 4 below
Transfer of Consent Holder and Certificates Deposits: Transfer of permits and consents Priority Table Section 417 Certificate Certificate of Compliance All Other Costs As per Scale of Charges	\$ 200 200 500 1,750
Scale of Charges: Staff time per hour:  • Management  • Team Leader/Principle  • Senior Technical  • Technical  • Field staff  • Administration	\$ 190 170 135 115 115
Disbursements Additional site notice Advertisements Vehicle use per kilometre Travel and accommodation Testing charges Consultants Commissioners Photocopying and printing	Actual Actual Actual 0.70 Actual Actual Actual Actual Actual

#### Notes:

 For additional permits in respect of the same site, activity, applicant, time of application, and closely related effect as the first application.

2. The deposit payable shall be 90% of the cost of a hearing as calculated by Council in accordance with information contained in the application file and using the scale of charges. The amount payable will be due at least 10 working days before the commencement of the hearing. If the amount is not paid by the due date, then the Council reserves the right under S36(7) of the Resource Management Act to stop processing the application. This may include cancellation of the hearing.

Should a hearing be cancelled or postponed due to the non-payment of the charge, the applicant will be invoiced for any costs that arise from that cancellation or postponement.

Following completion of the hearing process, any shortfall in the recovery of hearing costs will be invoiced, or any over recovery will be refunded to the applicant.

- 3. Where actual and reasonable costs are less than the deposit paid, a refund will be given.
- 4. Where an applicant requests under s100A (for a consent hearing) or under s357AB (for the hearing of an objection) an independent commissioner(s); the applicant will be required to pay any increase in cost of having the commissioner(s).

Where a submitter(s) requests under s100A an independent commissioner(s) any increase in cost that is in addition to what the applicant would have paid shall be paid by the submitter. If there is more than one submitter who has made such request the costs shall be evenly shared.

#### **Review of consent conditions**

Following the granting of a consent, a subsequent review of consent conditions may be carried out at either the request of the consent holder, or as authorised under Section 128, as a requirement of Council. Costs incurred in undertaking reviews requested by the consent holder will be payable by the consent holder at the rates shown in the Scale of Charges above.

Reviews initiated by Council will not be charged to consent holders.

#### **Compliance Monitoring Charges**

Compliance charges may also be applied to any granted consent(s). These can be found via Council's website at: <a href="https://www.orc.govt.nz/media/8679/annual-plan-2020-21">https://www.orc.govt.nz/media/8679/annual-plan-2020-21</a> digital.pdf

# **Resource Consent Application Form 10A**

Land Use Consent - Structures in, on or over the bed of a waterbody

#### **IMPORTANT NOTES TO THE APPLICANT**

You must complete this form and Resource Consent Application Form 1 in full.

Use this form when applying for resource consent to erect, place, extend, alter, replace, reconstruct or demolish any structure in, on or over the bed of a waterbody e.g. bridges, culverts, boardwalks, pipes, cables, steps, buildings, fords, retaining walls, gabion baskets, jetties, planting etc.

This form does not cover drainage maintenance and stream clearance activities - please refer to the ORC website for an alternative form these activities.

It is crucial that you provide as much relevant information as possible with your application and in an understandable way. This will help ORC staff process it efficiently, and at the minimum cost.

If all the necessary information is not entered on the form or supplied with the application then Otago Regional Council may return your application, request further information or publicly notify your application. This will lead to delays in the processing of your application and may increase processing costs.

This application form, when properly completed, should provide an adequate "Assessment of Effects on the Environment" (AEE) where the adverse effects of a proposal are not significant. However, this can only be determined on application.

#### **GENERAL**

1.	Which of the following activities are you seeking to undertake? (please tick)				
		Erect or place a new structure			
		Alter / extend an existing structure			
		Replace / demolish an existing structure			
2.	2. What is the purpose of the proposed works?				
3.	What	term of consent is sought to undertaken these works?			
4.	Name	the waterbody where the proposed works will take place.			

5. Please provide an accurate GPS location of the Transverse Mercator) format:	e proposed works in NZTM2000 (New Zealand				
E 1266096 N 5007045					
(Note: this should be two seven digit numbers e.g. E1415593 N4923363)

What is the size of the upstream catchment? (hectares					
Is the site located in or near a Regionally Significant W	etland?				

10. Within 100 metres of the proposed works, there any of the following:		
Signs of fish / invertebrate life? Describe.		
Areas where food is gathered from the waterbody? Describe.		
Wetlands nearby? Describe		
Waste discharges (e.g. industries, sewage plants)? Describe.		
Recreational activities? Describe.		
Areas of significance to iwi? Describe.		
Water takes? Describe.		
Signs of erosion? Describe.		
CONSTRUCTION METHODOLOGY  11. Describe how the proposed works will be undertaken, including (but not limited to):  a. What the structure is / will be made of;  b. For culverts, the fill material to be used over the culvert;  c. For culverts, the gradient that the culvert is / will be laid in the stream bed;  d. Details of any secondary flow path proposed;  e. Hours of operation;  f. Total duration of the works and proposed commencement and completion dates;  g. Who will be undertaking the works;  h. Whether the work will be undertaken in stages and what the different stages involve;  i. Machinery to be used and whether it will be operated from the bank or within the bed of the waterbody;  j. How you will minimise the mobilisation / release of sediment.		

_	
	e attach technical drawings of the structure / proposed structures, along with details low the structure(s) will be secured in place. These drawings must show all of the details:
•	$For \ crossings, the \ length \ of \ crossing \ approach \ and \ the \ length \ of \ the \ crossing \ itself;$
•	For culverts, the diameter / height / width of the culvert;
•	For bridges / boardwalks, the cross sectional area beneath the structure, plus the height of the underside of the structure relative to the adjacent natural ground level;
•	Width and depth of the original stream channel;
•	Top width of the original stream channel;
•	For culverts, the depth of fill over the culvert;
•	For bridges, the number, location, dimension and material of any piles used;
•	Details and location of any wingwalls / abutments / foundations;
•	Secondary flow path location and dimensions (where applicable).
13. Please	e attach hydrological and hydraulic design details and calculations.
	e works be undertaken in flowing water, or will the water be dammed or diverted in ay to provide a dry working area? Please describe.
	e comment on the extent of bank disturbance and vegetation clearance required to take the works, including road / track construction.

		access to any part of the waterbody be restricted during or following the works? escribe to what extent and for how long.
		ny alternative locations of methods for undertaking the proposed works? If yes, e and explain why have you chosen this location and method over others.
T\	PES OF C	ONSENT NEEDED
	Please exp	plain why the proposed works cannot meet any of the permitted activity Rules rough to 13.2.1.8, or Rules 13.3.1.1, 13.3.1.2 or 13.4.1.1 of the Regional Plan:
19.	comply wit	listurbance of the bed of the waterbody associated with the proposed works h permitted activity Rule 13.5.1.1 of the Regional Plan: Water?
	□ Yes	
	□ No (spec	
		there will be an increase in scale of an existing structure bed disturbance will be wider than the general area of the structure
		bed disturbance will cause flooding or erosion
	_	time to complete the work in the wetted bed will exceed 10 hours
		sediment discharge associated with bed disturbance will result in a conspicuous change in colour or water clarity more than 200 m downstream
		a lawful water take will be adversely affected
		site will not be left tidy upon completion
		there will be a change to the hydrological function of a Regionally Significant Wetland
		there will be damage to fauna, or New Zealand native flora, in or on a Regionally Significant Wetland

20.	Will there be any discharge of concrete or any other contaminant to water as a result of the proposed works?			
	□ Ye	s	ı	□ No (specify why)
21.		sion c		dammed or diverted as a result of the proposed works, will the damming / y with permitted activity Rule 12.3.2.1 or 12.3.2.3 of the Regional Plan:
	□ Ye	S		
	□ No	(speci	fy wh	y)
			the s	ize of the catchment upstream is more than 50 hectares in area
				epth of water immediately upstream of the dam will be more than 3 metres deep ore than 20,000 cubic metres in volume
			the c	ourse of water will not remain within the bed of the waterbody
			the c	ourse of water will not be returned to its normal course
			a law	ful water take will be adversely affected
			a Re	gionally Significant Wetland will be affected
				damming / diversion will cause erosion, land instability, sedimentation or erty damage
			the d	lamming / diversion is prohibited by Rules 12.3.1.1 to 12.3.1.4
to a typi deta	ivoid, i cal sol ails (ai	remedy utions,	or m check sepa	he potential to affect a number of matters listed below. Some typical solutions itigate these adverse effects have been provided. If you intend on using these k the box provided. If you are proposing an alternative solution, please provide arate sheet if required). <b>Note that all <u>actual</u></b> and <u>potential</u> adverse effects
22.	Wate	r Qual	ity (pl	ease tick)
YES	S NO	N/A		
			be m	storage tanks and machinery working and stored in the construction area shall naintained at all times to prevent leakage of oil and other contaminants into r, and no refuelling of machinery shall occur within the waterbody.
				nachinery shall be water-blasted prior to being brought on site, to reduce the ntial for pest species being introduced to water.
			At no time during the proposed works shall machinery be washed within the bed the waterbody.	
				easonable steps shall be taken to minimise the release of sediment to water by ertaking the following methods (please tick):
				Sediment traps
				Undertaking work when flows are low / waterbody is dry
				Diverting water from the working area
				Other (please specify)

			Where wet concrete may be used in the waterbody (please tick):
			☐ Avoid flowing water coming into contact with the concrete until the concrete is firmly set.
			☐ Use boxing or other similar devices to contain wet concrete during construction.
			☐ Ensure that the handling of concrete is undertaken in a manner that does not result in spillage into any waterbody.
			☐ No equipment used in the pouring of concrete shall be washed out on site.
If yo	ou hav	e ansv	vered "NO" to any of the above, you must explain why:
23.	Bed A	' Habit	at Disturbance (please tick)
YES	NO	N/A	
			Works will be undertaken when flows in the waterbody are low.
			Works will not be undertaken between certain months avoid disturbing spawning habitat (please specify months):
			Fish passage will be provided for.
			Bed disturbance will be limited only to the extent necessary to carry out the works.
			Machinery used to undertake the works will not be operated from the wet bed.
If yo	ou hav	e ansv	vered "NO" to any of the above, you must explain why:
24.	Eros	ion (pl	ease tick)
YES	NO	N/A	
			Damage to riparian vegetation will be minimised when undertaking the works.
			Any damage to the stream banks, including riparian vegetation, as a result of the works will be reinstated within one month.
			Where permanent diversions of water are undertaken:
			☐ All reasonable measures will be undertaken to promote bank stability of any new channel as rapidly as possible.
			☐ There will be no reduction in the surface flow of the waterbody as a result of the diversion.
If yo	ou hav	e ansv	vered "NO" to any of the measures above, you MUST explain why:
-			

#### 25. Other Water Users YES NO N/A Lawful water takes downstream of the proposed works will not be adversely affected. Recreational users of the waterbody will be affected by the proposed works. If lawful water takers or recreational users will be affected, please provide measures to avoid, remedy or mitigate adverse effects on them: 26. Other Waterbody Values YES NO N/A П П Amenity and natural character of the waterbody will not be significantly affected by the proposed works. The site will be tidied upon completion of works. Public access to the waterbody will not be impeded by the proposed works. Hours of work will be between 7.00 am and 7.00 pm, Monday to Friday, and will not be undertaken on Public Holidays. If hours of work to differ from that given, please state here: If koiwi tangata (human skeletal remains), Maori artefact material, or archaeological material that predates 1900 is found, work will stop until an inspection by the appropriate authorities can be made. Effects on heritage values will be avoided. If you have answered "NO" to any of the measures above, you MUST explain why:

#### STATUTORY ASSESSMENT

The Resource Management Act requires this application to include an assessment of the proposed activity against the relevant statutory documents. In this case, the Regional Plan: Water and Iwi Management Plans are the most relevant documents. For larger applications, assessment against higher order documents may also be required.

If you are unable to answer the questions below, or you believe your proposal is inconsistent with the relevant policies and documents discussed, it is recommended you seek professional planning assistance to help you with your application.

#### 27. Regional Plan: Water for Otago (RPW)

The following policies from the RPW may be relevant to your application:

- Undertake the works in a manner that avoids, in preference to remedying or mitigating, adverse
  effects on natural values and character, ecology and habitat, water supply values, historic places
  or archaeological sites, values of significance to Kai Tahu, amenity values, lawful water users
  and causing or exacerbate flooding, erosion, land instability, sedimentation or property damage
  (5.4.2).
- Avoid adverse effects on existing lawful uses and priorities (5.4.3).
- Recognise Kai Tahu's interests in Otago's lakes and rivers by promoting opportunities for their involvement in resource consent processing (5.4.4).
- Recognise the Water Conservation (Kawarau) Order 1997 by preserving, as far as possible, the
  waters set out in Schedule 1 of the Water Conservation Order in their natural state, protecting
  the outstanding characteristics of waters set out in Schedule 2 of the Water Conservation Order,
  and sustaining the outstanding amenity and intrinsic values set out in both Schedules of this
  order (5.4.5).
- Only restrict legal public access to and along the margins of lakes and rivers where necessary... to protect the health or safety of people and communities, to ensure a level of security consistent with the purposes of a resource consent, or in other exceptional circumstances... (5.4.6).
- Where existing public access to or along the margins of lakes or rivers is restricted, the provision or enhancement of alternative access may be required and will be promoted (5.4.7).
- Have regard to topography, natural flow characteristics or water levels, water colour and clarity, ecology, and the extent of use or development within the catchment when considering adverse effects on natural character of lakes, rivers and their margins (5.4.8).
- Have regard to aesthetic values and recreational opportunities provided by a lake or river or its margins when considering adverse effects on amenity values (5.4.9).
- Have regard to any heritage values of any site, building, place or area for any activity involving surface water or the bed or margin of any lake or river (5.4.10).
- Encourage and support community initiatives that assist in the achievement of the maintenance or enhancement of lakes and rivers and their margins (5.4.13).
- Manage water quality in rivers and wetlands by maintaining good water quality, enhancing water quality where it does not meet Schedule 15 limits (7.B.1).
- Avoid objectionable discharges of water or contaminants that degrade the natural and human use values of lakes, rivers and wetlands (7.B.2).
- Allow discharges of water or contaminants to lakes, rivers and wetlands that have minor effects or are short term (7.B.3).
- Encourage adaptive management and innovation that reduces the level of contaminants in discharges (7.B.8).
- Give priority to avoiding changes in the nature of flow and sediment processes in water bodies, where those changes will cause adverse effects on the stability and function of existing structures, associated erosion, sedimentation or land instability, or any reduction in the flood carrying capacity of any lake or river (8.4.1).

- Provide for fish migration through structures in watercourses (8.5.1).
- When manging bed disturbance, have regard to any adverse effect on the spawning requirements of indigenous fauna, and trout or salmon, bed and bank stability, water quality, amenity values caused by any reduction in water clarity, and downstream users (8.6.1).
- Promote best management practices for activities that occur within or adjacent to the bed of lakes and rivers in order to avoid, remedy or mitigate any adverse effect (8.6.2).
- Promote creation, retention and enhancement of appropriate riparian vegetation (8.7.1).
- Prohibit the introduction of any plant included in any pest management strategy in force in Otago, to any part of the bed or water of any Otago lake or river (8.7.2).
- Consider practical alternatives to the reclamation of the bed of any lake or river, and the deposition of any substance in, on or under, the bed or margin of any lake or river (8.8.1).
- Require that only cleanfill be used to create any reclamation of the bed of a lake or river (8.8.2).
- Avoid adverse effects on Regionally Significant Wetlands or regionally significant wetland values (10.4.2).

#### 28. National Policy Statement for Freshwater Management 2020

The NPS-FM sets out a single objective, that natural and physical resources are managed in a way that prioritises:

- a. first, the health and well-being of water bodies and freshwater ecosystems;
- b. second, the health needs of people (such as drinking water); and
- c. third, the ability of people and communities to provide for their social, economic, and cultural well-being, now and in the future.

The following policies are likely to be of relevance to this application:

Policy 1: Freshwater is managed in a way that gives effect to Te Mana o te Wai.

Policy 2: Tangata whenua are actively involved in freshwater management (including decision-making processes), and Māori freshwater values are identified and provided for.

Policy 3: Freshwater is managed in an integrated way that considers the effects of the use and development of land on a whole-of-catchment basis, including the effects on receiving environments.

Policy 6: There is no further loss of extent of natural inland wetlands, their values are protected, and their restoration is promoted.

Policy 7: The loss of river extent and values is avoided to the extent practicable.

Policy 8: The significant values of outstanding water bodies are protected.

Policy 9: The habitats of indigenous freshwater species are protected.

Policy 10: The habitat of trout and salmon is protected, insofar as this is consistent with Policy 9.

Policy 14: Information (including monitoring data) about the state of water bodies and freshwater

#### 29. Partially Operative Regional Policy Statement and Proposed Regional Policy Statement

The following provisions apply to river and instream works:

#### **PO-RPS**

- Provide for the economic wellbeing of Otago's people and communities by enabling the resilient and sustainable use and development of natural and physical resources (1.1.1).
- Provide for the social and cultural wellbeing and health and safety of Otago's people and communities when undertaking the subdivision, use, development and protection of natural and physical resources (1.1.2)
- Achieve integrated management of Otago's natural and physical resources (1.2.1).
- Recognising and protecting important sites and values of cultural significance to Kāi Tahu (2.2.2).
- Manage the beds of rivers, lakes, wetlands, their margins, and riparian vegetation to:
  - Safeguard the life supporting capacity of fresh water;
  - Maintain good quality water, or enhance it where it has been degraded;
  - o Maintain or enhance bank stability;
  - o Maintain or enhance ecosystem health and indigenous biological diversity;
  - Maintain or enhance, as far as practicable their natural functioning and character and amenity values;
  - Control the adverse effects of pest species, prevent their introduction and reduce their spread; and
  - Avoid, remedy or mitigate the adverse effects of natural hazards, including flooding and erosion (3.1.2).
- Protect and enhance areas of significant indigenous vegetation and significant habitats of indigenous fauna, by:
  - Maintaining those values which that contribute to the area or habitat being significant;
  - Avoiding significant adverse effects on other values of the area or habitat;
  - Remedying when other adverse effects cannot be avoided;

- o Mitigating when other adverse effects cannot be avoided or remedied:
- Encouraging enhancement of those areas and values which that contribute to the area or habitat being significant;
- Controlling the adverse effects of pest species, preventing their introduction and reducing their spread (3.2.2).
- Identify and protect outstanding freshwater bodies (3.2.13 & 3.2.16)
- Minimise natural hazard risk to people, communities, property and other aspects of the environment by:
  - o Avoiding activities that result in significant risk from natural hazard;
  - o Enabling activities that result in no or low residual risk from natural hazard;
  - Avoiding activities that increase risk in areas potentially affected by coastal hazards over at least the next 100 years;
  - Encouraging the location of infrastructure away from areas of hazard risk where practicable;
  - Minimising any other risk from natural hazard (4.1.6).
- Maintaining and enhancing public access (5.1.1)

#### LF-VM-O2 – Clutha Mata-au

- water bodies support thriving mahika kai and Kāi Tahu whānui have access to mahika kai:
- indigenous species migrate easily and as naturally as possible along and within the *river* system;
- In the Upper Lakes rohe, the high quality waters of the lakes and their tributaries are protected, recognising the significance of the purity of these waters to Kai Tahu and the wider community:
- In the Dunstan, Manuherekia and Roxburgh rohe, innovative and sustainable land and water management practices support food production in the area and reduce discharges of nutrients and other contaminants to water bodies so that they are safe for human contact.
- In the Lower Clutha rohe,
  - there is no further modification of the shape and behaviour of the water bodies and opportunities to restore the natural form and function of water bodies are promoted wherever possible
  - o land management practices reduce dischargese of nutrients and other contaminants to water bodies so that they are sage for human contact and there are no direct disharges of wastewater to waterbodies.

LF-VM-O3 – North Otago

By 2050 in the North Otago FMU

- The ongoing relationship of Kāi Tahu with *wāhi tūpuna* is sustained and Kāi Tahu maintain their connection with and use of the *water bodies*;
- Healthy riparian margins, wetlands, estuaries and lagoons support thriving mahika kai, indigenous habitats and downstream coastal ecosystems;
- Indigenous species can migrate easily and as naturally as possible to and from the coastal environment;
- Land management pratices reduce dischages of nutrients and other contaminants to water bodies so that they are safe for human contact.

LF-VM-O4 – Taieri

By 2050 in the Taieri FMU

- Healthy wetlands are restored in the upper and lower catchment wetland complexes, including the Waipori/Waihola wetlands, Tunaheketaka / Lake Taieri, scroll plain, and tussock areas;
- The gravel *bed* of the lower Taieri is restored and sedimentation of the Waipori/Waihola complex is reduced,
- Water bodies support healthy populations of galaxiid species
- There are no direct discharges of wastewater to waterbodies

	<ul> <li>Healthy estuaries, lagoons and coastal waters support thriving mahika kai and downstream coastal ecosystems, and indigenous species can migrate easily and as naturally as possible to and from these areas,</li> </ul>
	<ul> <li>There is no further modification of the shape and behaviour of the water bodies and opportunities to restore the natural form and function of water bodies are promoted wherever possible, and</li> </ul>
	- Discharges of contaminants from urban environments are reduced so that water bodies are safe for human contact.
	LF-VM-O6 – Catlins
By 20	30 in the Catlins
	<ul> <li>Waterbodies support thriving mahika catchment and access to Kai Tahu whanui to mahika kai and access of Kai Tahu whanui to mahika kai;</li> </ul>
	<ul> <li>the high degree of naturalness and ecosystem connections between the forests, freshwater and coastal environment are preserved.</li> </ul>
	<ul> <li>Healthy, clear and clean water supports opportunities for recreation and sustainable food production for future generations.</li> </ul>

	Discuss how your proposal meets the relevant policies above:	ovironmen  original little lit	tal Iwi Management Plan 2008 contains requirements that must be considered. Require that placement of culverts and other flood works activities in the beds or margins of waterways is such that the passage of native fish and other stream life is not impeded. Recommend that culvert pipes are buried in the streambed, so that gravel can lie in the bottom third of the pipe, thus providing natural habitat in the culvert so that fish can migrate through them.  Require that the placement of culverts and other flood works activities in the beds or margins of waterways occurs in a manner that minimises disturbance to the streambed. Recommend that tracks leading to culverts are designed (e.g. contoured) so that stormwater run-off and any effluent on the track is directed away from the stream. Such discharges should be to land and not directly to water.  Require that that placement of culverts and other flood works activities in the beds or margins of waterways occur at times of low or no flow.  Require that short term effects on water quality and appearance are mitigated during culvert or flood works construction, and for a settling period following. For example, straw bales may be used to minimise turbidity, and contain discolouration and sedimentation. Avoid the direct or indirect modification of any existing wetland area.  Ensure that all native fish species have uninhibited passage from the river to the sea at all

An assessment on the Waitaki Iwi Management Plan is required.

#### 31. Further Assessment of Environmental Effects (AEE)

Depending on the scale of the proposed activity, a separate Assessment of Environmental Effects (AEE) may be required as outlined in the Fourth Schedule of the Resource Management Act 1991. If you are unsure whether a separate AEE is required, please contact the Consents Team prior to lodging your application. The extent of detail required should be relative to the scale and significance of the potential adverse effects that the activity may have on the receiving environment. The AEE must contain, but is not limited to:

- if it is likely that the activity will result in any significant adverse effect on the environment, a description of any possible alternative locations or methods for undertaking the activity;
- an assessment of the actual or potential effect on the environment of the activity;
- if the activity includes the use of hazardous installations, an assessment of any risks to the environment that are likely to arise from such use;
- if the activity includes the discharge of any contaminant, a description of -
  - (i) the nature of the discharge and the sensitivity of the receiving environment to adverse effects; and
  - (ii) any possible alternative methods of discharge, including discharge into any other receiving environment;
- a description of the mitigation measures (including safeguards and contingency plans where relevant) to be undertaken to help prevent or reduce the actual or potential effect;
- identification of the persons affected by the activity, any consultation undertaken, and any response to the views of any person consulted;
- if the scale and significance of the activity's effects are such that monitoring is required, a
  description of how and by whom the effects will be monitored if the activity is approved;
- if the activity will, or is likely to, have adverse effects that are more than minor on the exercise
  of a protected customary right, a description of possible alternative locations or methods for the
  exercise of the activity (unless written approval for the activity is given by the protected
  customary rights group).

#### 32. Policy Assessment

For larger applications, you may also need to provide a policy assessment which includes an assessment of the proposed activity against:

• the matters set out in Part 2 of the Resource Management Act 1991; and other relevant national environmental standards or national policy statements.

# CHECKLIST

In order to submit a complete application, have you remembered to?
☐ Fully completed this application form and Form 1?
☐ Attached an Assessment of Environmental Effects? (if required)
☐ Attached maps, technical drawings and photographs as appropriate?
☐ Attached a Certificate of Title for the site that is less than 3 months old?
☐ Attached any written approvals?
☐ Paid your deposit?

To keep consent processing costs to a minimum it is strongly recommended that the checklist is complete, and all items required are attached **before** you lodge your application to the Otago Regional Council.

# **Resource Consent Application Form 22**

#### IMPORTANT NOTES TO THE APPLICANT

You must complete this application form and Resource Consent Application Form 1 in full.

It is crucial that you provide as much relevant information as possible with your application and in an understandable way. This will help ORC staff process it efficiently, and at the minimum cost.

If all the necessary information is not entered on the form or supplied with the application then Otago Regional Council may return your application, request further information or publicly notify your application. This will lead to delays in the processing of your application and may increase processing costs.

#### **Applications made under section 127:**

This application is being made under section 127 of the Resource Management Act 1991, which allows the holder of a resource consent to apply to the Otago Regional Council for a change or cancellation of a condition of the consent. However, no holder of any consent may apply for a change or cancellation of a condition on the duration of the consent.

An application made under section 127 is processed as though it was an application for a resource consent for a discretionary activity, except that the assessment is based on the change or cancellation of a condition and the effects of the change or cancellation respectively only. It does not provide for the reconsideration of the entire consent.

However, case law indicates that where an application to change or cancel a consent condition results in materially different effects, it is preferable to treat it as an application for a new consent.

#### **GENERAL**

- 1. What is the consent number(s) you wish to change/cancel the conditions of?
- 2. List the condition/s number/s and give details of the proposed changes/cancellation:

#### 3. Assessment of Environmental Effects (AEE)

An application for a change or cancellation to a condition of a resource consent must include an Assessment of Environmental Effects (AEE) as outlined in the Fourth Schedule of the Resource Management Act 1991. The extent of detail required should be relative to the scale and significance of the potential adverse effects that that change/cancellation may have on the receiving environment.

You must provide an AEE of the change/cancellation of consent condition(s) which contains, but is not limited to:

- if it is likely that the activity will result in any significant adverse effect on the environment, a description of any possible alternative locations or methods for undertaking the activity;
- an assessment of the actual or potential effect on the environment of the activity;
- if the activity includes the use of hazardous installations, an assessment of any risks to the environment that are likely to arise from such use;
- if the activity includes the discharge of any contaminant, a description of -
  - (i) the nature of the discharge and the sensitivity of the receiving environment to adverse effects; and
  - (ii) any possible alternative methods of discharge, including discharge into any other receiving environment;
- a description of the mitigation measures (including safeguards and contingency plans where relevant) to be undertaken to help prevent or reduce the actual or potential effect;
- identification of the persons affected by the activity, any consultation undertaken, and any response to the views of any person consulted;
- if the scale and significance of the activity's effects are such that monitoring is required, a description of how and by whom the effects will be monitored if the activity is approved;
- if the activity will, or is likely to, have adverse effects that are more than minor on the exercise
  of a protected customary right, a description of possible alternative locations or methods for
  the exercise of the activity (unless written approval for the activity is given by the protected
  customary rights group).

# 4. Will the proposed change/cancellation to the condition(s) result in any adverse effects that are different from those currently authorised by the consent? YES NO

\*If yes, this must be described in sufficient detail in the AEE and it may be that a new consent is required.

#### 5. Policy Assessment

You must also provide a policy assessment relating to the change/cancellation, which includes an assessment of the change/cancellation against:

- the matters set out in Part 2 of the Resource Management Act 1991; and
- any relevant objectives, policies, rules or other provisions of:
  - o a national environmental standard;
  - o other regulations;
  - o any relevant national policy statements;
  - o a New Zealand coastal policy statement (if applicable);
  - o a regional policy statement or proposed regional policy statement;
  - o a regional plan or proposed regional plan.

# CHECKLIST

order to submit a complete application, have you remembered to?
☐ Fully completed this application form and Form 1?
☐ Attached an Assessment of Environmental Effects?
☐ Attached a Policy Assessment?
☐ Attached any written approvals?
☐ Paid your deposit or attached a cheque?

To keep consent processing costs to a minimum it is strongly recommended that the checklist is complete, and all items required are attached **before** you lodge your application to the Otago Regional Council.
